

Business and Product Requirements

Designing Minds website prototype

Prepared for client review - 29 June 2026

This document captures our current interpretation of the business goals, customer needs, product assumptions, and core functionality in the working prototype.

Purpose of the Prototype

The prototype turns the current Designing Minds website and catalogue into a working experience that the client can review by using it directly.

Instead of reviewing ideas in theory, the client can browse resources, open product pages, add items to cart, create an account, and see how purchased resources would be accessed after payment.

Business Goals

- Make the catalogue easier to understand and navigate.
- Give customers more than one way to find the right resource.
- Support once-off digital purchases for individual resources, packages, and access plans.
- Make premium offers, especially access plans, more visible.
- Reduce confusion around downloads by keeping purchases and files inside the customer account.
- Create a stronger foundation for future catalogue growth.

Customer Goals

- Quickly find resources by grade, subject, term, format, or offer type.
- Use a simpler grade-based journey when the full catalogue feels overwhelming.
- Compare individual resources, packages, and access plans before buying.
- Review cart contents before checkout.
- Create or use a customer account to complete checkout.
- Return to the account later to view orders and download purchased files.

Core Functionality in the Prototype

- Public pages: Home, About, Contact, Help, legal pages, and catalogue browse pages.
- Catalogue browsing: Shop all resources, browse by grade, and browse packages/access plans.
- Product pages: price, grade, term, year, subject, product type, format, description, included content, and add-to-cart action.
- Cart and checkout: customers can add products to cart, review totals, and proceed to payment.
- Customer accounts: login, sign-up, account overview, order history, and order detail pages.
- Downloads: purchased files unlock on the order detail page after payment is confirmed.
- Admin foundation: products, subjects, FAQs, and testimonials can be managed as structured content.

Current Assumptions

- The main business value is catalogue clarity and easier buying, not a redesign of every static page.
- Home, About, and Contact are useful entry/support pages, but the catalogue journey is the main focus.
- All digital products are once-off purchases; access plans do not renew automatically.
- Checkout requires a customer account before payment can be completed.
- Access plans are selected for a grade during checkout.
- Packages, currently labelled as bundles in parts of the prototype, group resources into discounted once-off purchases.

Out of Scope for This Review

- Final copywriting for all marketing/static pages.
- Final brand design, photography, and visual polish.
- Final legal wording for privacy, terms, refunds, and licensing.
- Final payment-provider production setup.
- Final product file uploads and complete product descriptions for every resource.

Questions for Client

- Should the customer-facing label be Packages, Bundles, or another name?
- What is the exact difference customers should understand between a full-year package and a yearly access plan?
- Should access plans unlock all resources for one selected grade, or only a defined subset?
- Are grades 3-7 the correct launch range?
- Are there any resource types missing from the current structure, such as worksheets, memos, packs, or lesson plans?
- What must be true before the prototype can move from review to launch preparation?
